

San Joaquin County Respiratory Illness Report

September 30, 2018 (Week 40) — March 9, 2019 (Week 10)

OVERVIEW

- This season continues to be milder than last season (Table 1 & Figure 1) but detections are higher than the 15/16 and 16/17 seasons (Fig. 1).
- Nine confirmed deaths (all ages) this flu season compared to twenty-three during the same time period last flu season (Table 1).
- In Week 10, the majority of influenza positive specimens were A/H3N2 instead of A/H1N1, a pattern that started in week 9 (Fig. 2).

Table 1. Deaths and Outbreaks, San Joaquin County

Indicators	Current Season	Previous Season
	(Week 40-Week 10)	(Week 40-Week 10)
Deaths due to influenza (total) *	9	23
<18 years ¹	0	1
18-64 years	7	5
65+ years	2	17
Respiratory outbreaks	1	13

*NOTE: New changes in Title 17 reporting: influenza deaths (ages 18-64 years) are no longer reportable as of this season; *All deaths are obtained from death certificates by date of death; therefore a significant delay in counting and will be updated in future reports; ¹pediatric deaths are still reportable.*

For information on influenza in California:

<https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/Immunization/Influenza.aspx>

For information on influenza in the United States:

<http://www.cdc.gov/flu/index.htm>

Notes: Because data are preliminary, the information may be updated in later reports as additional data are received. ²The percent of specimens testing positive for influenza is not reported because public health laboratories often receive samples that have already tested positive for influenza at a clinical laboratory and therefore percent positive would not be a valid indicator of influenza activity.
