

San Joaquin County Respiratory Illness (Influenza) Report

September 29, 2019 (Week 40) — December 28, 2019 (Week 52)

OVERVIEW

- Flu activity is increasing in San Joaquin County; this is similar to statewide and national trends.
- There have been three confirmed deaths this flu season compared to two deaths last season over the same time period (Table 1).
- In week 52, influenza positive specimens were predominantly influenza B, and influenza A/H1N1 circulation was increasing (Figure 2).

Table 1. Deaths and Outbreaks, San Joaquin County

Indicators	Current Season (Week 40-Week 52)	Previous Season (Week 40-Week 52)
Deaths due to influenza (total) *	3	2
<18 years	0	0
18-64 years	1	2
65+ years	2	0
Respiratory outbreaks	1	0

NOTE: *All deaths are obtained from death certificates by date of death; therefore a significant delay in counting and will be updated in future reports;

For information on influenza in California:

<https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/Immunization/Influenza.aspx>

For information on influenza in the United States:

<http://www.cdc.gov/flu/index.htm>

Notes: Because data are preliminary, the information may be updated in later reports as additional data are received. ²The percent of specimens testing positive for influenza is not reported because public health laboratories often receive samples that have already tested positive for influenza at a clinical laboratory and therefore percent positive would not be a valid indicator of influenza activity.

Sources: Table 1. Outbreaks accessed through local CalREDIE system and deaths obtained from the California Department of Public Health (CDPH) Influenza Surveillance program, 12/30/2019. Figure 1. Influenza positive tests were obtained from the CDPH Influenza Surveillance program, 1/2/2020. Figure 2. Influenza type and subtype data received from San Joaquin County Public Health Laboratory (SJCPLH), 12/30/2019.
