

San Joaquin County Respiratory Illness (Influenza) Report

September 29, 2019 (Week 40) — February 8, 2020 (Week 6)

OVERVIEW

- Flu activity is elevated in San Joaquin County; it is also elevated at the statewide and national levels.
- There have been eleven confirmed deaths this flu season compared to nine deaths last season over the same time period (Table 1).
- In week 6, the majority of influenza positive specimens were influenza A/H1N1, followed by influenza B (Figure 2).

Table 1. Deaths and Outbreaks, San Joaquin County

Indicators	Current Season (Week 40-Week 6)	Previous Season (Week 40-Week 6)
Deaths due to influenza (total) *	11	9
<18 years	1	0
18-64 years	2	9
65+ years	8	0
Respiratory outbreaks	5	0

NOTE: *All deaths are obtained from death certificates by date of death; therefore a significant delay in counting and will be updated in future reports;

For information on influenza in the United States:

<http://www.cdc.gov/flu/index.htm>

Notes: Because data are preliminary, the information may be updated in later reports as additional data are received. ²The percent of specimens testing positive for influenza is not reported because public health laboratories often receive samples that have already tested positive for influenza at a clinical laboratory and therefore percent positive would not be a valid indicator of influenza activity. When specimen submission is high, specimens may be randomly selected for testing.
