BLUE-GREEN ALGAE HEALTH CONCERNS
FOR HUMANS AND ANIMALS

Health officials urge caution

STOCKTON, CA (July 13, 2021) – Warm temperatures are here, creating conditions for blue-green algae to rapidly build or bloom on the surface of reservoirs, rivers, creeks, lagoons, lakes, and ponds.

San Joaquin County Public Health and Environmental Health officials and the state Regional Water Quality Control Board urge swimmers, boaters, and recreational water users to avoid contact with blue-green algae (BGA), also known as cyanobacteria. The algae blooms may produce toxins that can present a health hazard to humans and animals. San Joaquin County Public Health Officer Dr. Maggie Park advises, “To avoid illness, exercise caution and observe signage that warns visitors to avoid active algae blooms.”

The algae blooms can look like green, blue-green, white, or brown foam and scum floating on the water. Children are especially vulnerable as they play on the shoreline, drink more water than adults when swimming, and are a smaller body size. Dogs are also vulnerable to BGA poisoning. Many dogs are lost each year as they tend to drink more water and lick algae off their fur.

Human Exposure General Health Effects:

- Rashes or other skin irritations
- Allergy-like reactions, runny nose or sore throat
- Toxins ingested in large amounts can cause sharp, severe stomach problems like diarrhea and vomiting, liver damage, numb limbs, tingling fingers and toes, or dizziness

Animal Exposure Health Effects:

- Weakness, staggering
- Difficulty breathing
- Convulsions
- Vomiting and diarrhea
- Death, if not treated

- more -
Statewide Guidance on Harmful Algae Blooms:

- Avoid wading and swimming in water containing visible blooms or water containing algae scum or mats, which are most often present at the shoreline.
- Take care that pets and livestock do not drink the water or swim through scums, mats, or lick their fur after going in the water. Wash exposed pets in clean drinking water.
- If no algae scums or mats are visible, watch young children and warn them not to swallow the water.
- Do not drink, cook, or wash dishes with untreated water.
- Consume fish only after removing guts and liver, and rinse fillets in clean drinking water. Mussels should not be consumed.
- Get medical treatment right away if you think you, your pet, or your livestock might have been poisoned by blue-green algae toxins.

Jasjit Kang, Director of the Environmental Health Department reports, “Environmental Health Department staff have posted health advisory signs at local marinas cautioning swimmers, boaters, and recreational users to avoid contact with algal blooms.”
